Recommendation

Revenue volatility indicates seasonal demand (April, July, September November are months surrounding various holidays and religious

Increase inventory levels during peak months and allocate larger budgets to these periods - revenue peaked in April, July, September of 2011. Investigate causes of revenue declines during weaker periods business strategy where necessary - revenue declined in February and December of 2011.

As revenue declines during several periods of the year, management investigate potential causes such as product availability, pricing strategy customer retention issues and implement corrective actions to restore revenue growth.

Revenue Trend

There was a general decline in revenue between December 2010 and January 2011.

In 2011, revenue fluctuated within the first four months (January to April), May to August saw a steady but minimal decline in revenue. September to November of 2011 saw a huge increase in revenue, with the highest in November. This growing revenue suggests a higher demand for the products and successful sales performance. December 2011 saw a significant decline, with revenue dropping by approximately eight hundred thousand (800 000) Pounds.

Revenue declines during several periods of the year, which indicates weakening demand, operational challenges and occasionally, weak marketing.
